Through below paragraphs, I would like to present my argument in favour of construct of Nodes of Moon (Rahu & Ketu) being a form of Matter.

The Sun has got its heliosphere, directed from Taurus (Vrishabha) zodiac & towards Scorpio (Vrischika) zodiac. The shape of heliosphere is as that of Shiva lingam. Vrishabha is the Vahana of lord Shiva. This confirms that Heliosphere itself is the Shiva lingam.

There is a popular notion that states 'Ekoham Shivam', which means that there is only one Shiva.

Above statement is directly in conflict with a diagram of Earth's magnetosphere, resembling a Shiva lingam, which is taught in various universities. Earth's magnetosphere neither has specific link with Vrishabha constellation (Zodiac), nor its presence is in confirmation with 'Ekoham Shivam'. As per the readings from Magnetosphere of the Earth, it is understood that Cusps directs magnetic plasma, coming from the Sun, towards poles of the Earth. But poles of the Earth are very cold, which conflicts with the temperature of something coming from the Sun, which has to be very hot. When we check temperatures at equator of the Earth, they match with that of hot plasma coming from the Sun. This means that the Earth receives magnetic plasma through its Magnetic equatorial region. At the same time, the Earth feeds the Moon by pushing Magnetic plasma originating from its magnetic equator, and directed towards lunar orbit. This phenomenon is similar to an act by a bird, wherein she consumes food through her beak & feeds her baby by pushing food from the same beak to her baby's beak.

This also means that magnetic plasma/ Energy internally moves from the Earth's equatorial region towards both of its polar regions. This is confirmed by Northern lights & Southern lights emitted by the Earth, through its Magnetic poles, which are similar to that of energy emitted from poles of a Pulsar.

Absence of the Earth's magnetosphere approves the presence of Rahu & Ketu, in the form of meeting points of 'discus of magnetic plasma emerging from the Sun and directed towards equatorial region of the Earth' with 'a similar discus emerging from the Earth's magnetic equator and directed towards orbital path of the Moon'. This fact is confirmed by impact of Rahu & Ketu on our lives, as reflected in our horoscopes. In contrast to it, there is no such impact or mention of such impact due to the Earth's magnetosphere in any astrological notes. Also, there is a mention of 'Mohini (Krishna) or the Earth' dividing Rahu & Ketu through discus, as described in the epic of Samudra Manthan.

**So, the conclusion is that;**

1. The Earth does not have a Magnetosphere or Cusps.
2. Nodes of Moon (Rahu & Ketu) are two points of intersection of 'discus of magnetic plasma emerging from the Sun and directed towards equatorial region of the Earth' with 'discus of magnetic plasma emerging from the Earth's magnetic equator and directed towards orbital path of the Moon'. Rahu & Ketu are a form of matter (magnetic plasma), because there is a concentration of magnetic plasma at these points of intersection, hence they impact our lives, as reflected in our horoscopes.
